

Meridian

Multi-team project intelligence that tracks cross-team dependencies, remembers commitments, and delivers role-tailored briefings through messaging — so everyone stays aligned without checking a dashboard.

THE PROBLEM

Large feature sets span multiple teams with foundational dependencies flowing up to the frontend. Phase progress is invisible across team boundaries. Managers lack real-time status. Developers get blocked without knowing why. Jira and Linear show current state — they don't remember what was *promised*, or flag when reality diverges from the plan.

REQUIRED TECH STACK

■ RocketRide

Daily aggregation pipelines across all teams; multi-agent rollup per phase; orchestrates per-team sub-agents reporting upward to a coordination agent.

■ Butterbase

Zero-DevOps backend: teams, issues, phases, dependency graph, and role-based auth — all provisioned without infrastructure overhead.

■ XTrace

Persistent memory of every commitment. Automatically reconciles slips against downstream dependencies and surfaces contradictions over time.

■ Photon

Delivers role-differentiated briefings via Slack and iMessage. Accepts conversational replies to update issue state without touching a UI.

THE DEMO MOMENT

- Team A's foundational API slips a week — XTrace reconciles this against every downstream dependency automatically.
- Team B's frontend dev gets an iMessage: *"Your auth integration is now blocked. New ETA from Team A: June 12."*
- The director gets a Slack digest: one phase at risk, two teams affected, one suggested mitigation.

— A manager replies "*push issue #14 to Phase 3*" — the agent updates state and re-runs the dependency graph.

ROLES WE'RE LOOKING FOR

Backend / Integrations Butterbase setup, RocketRide pipelines, API wiring between services.	Agent / AI Engineer XTrace memory logic, LLM prompt design, dependency reconciliation. Most critical role.
Messaging / Frontend Photon integration, Slack and iMessage delivery, demo UI if needed.	Full-Stack Generalist Glue work, data modeling, keeping the demo alive under pressure.
